

Downsized

Challenge

Your Bin

When you refuse, reduce, reuse and recycle plastic, you quickly notice that most of your rubbish is food scraps.

Glass, paper, cardboard and metal all go in the recycling bin.

SEND 40% LESS TO LANDFILL.

Did you know up to 40% of what Australian households send to landfill is food waste that produces methane – a greenhouse gas with 25 times more global warming potential than carbon dioxide? Diverting your food scraps from landfill could shrink your household bin by 40%.

Downsized Your Household Bin Bag.

BioBag is transitioning to Australian made as quickly as possible for a very wide range of bin liners from 8, 10, 20, 30 litres up to 240 litres.

Challenge Yourself to Reduce the Size of Your Household Bin Bag

Using a BioBag with a kitchen caddy collects food scraps for composting and because it's ventilated it won't smell, even after a few days.

FOOD WASTE IN AUSTRALIAN LANDFILLS PRODUCES THE SAME AMOUNT OF GREENHOUSE GASES AS THE EMISSIONS OF AUSTRALIA'S STEEL AND IRON ORE INDUSTRIES COMBINED¹

Food waste creates nutrient-rich compost for soil.

You can compost your food scraps by:

- Setting up a household compost bin or worm farm
- Joining your community garden
- Downloading the ShareWaste app via ShareWaste.com
- Using a council FOGO bin (green bin) or asking your local Councillor
